

October 2022

Example weather event that may trigger a review of load limits without notice:

- Less than 50mm rain **predicted** in a 24-hour period:
 - manage road as if under “Dry Conditions” with daily inspections.
 - however, should new tension cracks or edge slumps appear, or increase, the road will be closed at the landslip site and re-opened pending engineering advice.
- Between 50mm and 100mm rain **predicted** in a 24-hour period:
 - continue to manage road as if under “Dry Conditions” with increased frequency of inspections.
 - however, should new tension cracks or edge slumps appear, or increase, the road will be closed at the landslip site and re-opened pending engineering advice.
- Above 100mm rain **predicted** in a 24-hour period:
 - road is closed.
 - site inspection to occur when rain has stopped.
 - road is only re-opened after surface water has dissipated and no further rain is imminent.
 - however, should new tension cracks or edge slumps appear, or increase, the road will remain closed and only be re-opened pending engineering advice.

Maintaining road safety and access across the city remains Council's highest priority
